DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "plurality of amplifying circuits" in claims 19, 20 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "first transistor is a PNP transistor" in claim 5 and "third transistor is a PNP transistor" in claim 12 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities: page 5, lines 13-32, transistors are labeled as D1/D3, which are supposed to be as Q1/Q3.

Appropriate correction is required.

Claim Objections

Claims 14-20 are objected to because of the following informalities:

Claims 14-18, "said output circuit unit" should correctly be --said output circuit device--.

Claims 19, 20, "said amplifying circuit arrangement" should correctly be --said amplifying circuit--.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear how "third transistor", which is PNP type transistor can be an emitter follower.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 are rejected under 35 U.S.C. 102(b) as being anticipated by Kimura (6,084,232).

Kimura (Figs. 1, 3-7) disclose an optical receiver pre-amplifier circuit comprising: Fig. 7, a photodiode (1); a pre-amplifier (2), wherein the schematic of pre-amplifier is disclosed in (figs. 3-6); and blocks (3-5) can be read as an output circuit having the functions thereof.

Claim 1 are rejected under 35 U.S.C. 102(e) as being anticipated by Ide (6,587,004).

Ide (Fig. 2) disclose an optical receiver circuit comprising: a photodiode (PD 100); a pre-amplifier (101); and a signal amplifier (102) can be read as an output circuit having the functions thereof.

Allowable Subject Matter

Claims 2-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 2-20 call for, among others, see claimed subject matters.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Kobayashi (6,639,473); Denoyer et al. (6,771,132)) disclose amplifier having photodiode.
